

On-Site Safety Seminar

This hydraulics safety seminar is designed to cover the safe use of **Hydraulic Jacks, Ram, Pumps and Tools used for lifting and general maintenance** in the construction and industrial work place. These tools work at pressures up to 10,000 psi and require special precautions to use safely. The seminar will cover basic hydraulic principles; proper handling and storage of the tools as well as basic trouble shooting of hydraulic equipment.

Based on participants training requirements and time, bearing and gear pulling safety can also be presented. The seminar requires approximately one hour, but can be adjusted based on customer requirements. There is no charge for this seminar.

Note: Power point projector or display monitor will be required for presentation.
